

Medical Information

Things For Us to Find Out About You and For You to Know

This is important information that we need to have from you and that you need to know!

Team Member Information Form

In the unlikely event that we need to provide emergency care or need to make a quick medical decision, we **MUST** have this information. This is one of the forms you will fill out during the training sessions. It can also be found on the RMI website [here](#). This form will provide important medical information which will tell us of any specific medical conditions and/or needs you may have. This "Team Member Information Form" will be sent by your team leader to RMI.

Please state on this form any medication (s) that you are taking presently, as well as any medical problems that we should be aware of - high blood pressure, diabetes, allergies, etc. Please bring with you (in your carry-on luggage) enough medicines (and a little extra) for your time in Haiti. It can be impossible to find many kinds of medications in Haiti.

Vaccinations

A current tetanus shot is **required**. You should have one every 10 years.

A typhoid vaccine is **required**. Check with your physician or your health department. A typhoid vaccine is good for 10 years.

Malaria prophylaxis is **required**.

A hepatitis A or immune globin is recommended by the CDC, but not required.

A hepatitis B vaccination is recommended for medical project personnel only.

Other medications, such as prescription Bactrim or Cipro, are sometimes prescribed by your physician for diarrhea. Over the counter Pepto-Bismol is also helpful for this.

Rabies vaccine is recommended for those who will be working with animals (such as in a vet clinic).
